HYNES GROUP, LLC
IT SOLUTIONS THAT FIT

"Why did we buy all this stuff?" If you're like many decision makers you've asked yourself this question about your business technology investments. Your budget dollars are a precious resource that you can't afford to squander on solutions that don't deliver.

The success of any software application is dependent on a solid network foundation and infrastructure. Performance, reliability and security together create an environment for a positive user experience and without it, your solutions become ineffective and frustrating to use.

At the Hynes Group, we take a different approach to delivering business technology solutions. We cut through the technical jargon and concentrate on designing and delivering solutions that fit the client's objectives. Solutions that fit the client's budget, timeline and expectations.

Our core objective is to be regarded as a trusted advisor by our clients; someone they can count on to give them straight facts so they can make decisions that support their technology objectives. In fact, we're one of the few technology companies you'll encounter that will advise you when it's not a good idea to spend your money.

Our consultants bring more than 50+ years of combined experience to organizations and we begin by listening to you, the client. Our technology experts provide strategic IT guidance, management and support that allows clients take their mind off technology and concentrate on their core business .

Product & Service Offerings

Microsoft SharePoint Services— since 2003 SharePoint has provides a single, integrated location where employees efficiently collaborate with team members, find organizational resources, manage content and workflows which enables them to make more-informed decisions.

Microsoft Cloud Computing— on premise or cloud based email solutions that match the clients budget, accessibility and security needs. The Hynes Group is a Microsoft Cloud Partner with extensive experience migrating clients from premise based email to cloud based email.

Virtualization—allows multiple operating systems to run on one physical server. Provides the ability to consolidate and share IT resources while reducing the hardware footprint, improve management, storage and recovery.

Infrastructure Services— server consolidation, virtualization network design and cloud technologies. The Hynes Group is able to provide CIO level consulting and design expertise for IT operations, develop IT strategies along with complete Project Management services

Backup & Recovery Services— time to replace that tape-based backup solution? The Hynes Group has automated disk backup & recovery solutions that keep critical records safe, secure and accessible.

Full Support Services—The Hynes Group offers multiple levels of pro-active server, network and desktop monitoring, administration, maintenance, help-desk and troubleshooting services based on the client needs.

Servers & Virtualization

At one time many years ago, clients would purchase a single server to handle their entire business needs. All software would reside on that one server and users would connect centrally to that server. Over the years distributed processing became the more popular method for server deployment. Clients soon found themselves with dozens and dozens of servers, some of which performed only a single task or supported only a few applications which resulted in very inefficient use of those servers.

Virtualization is the means by which a single physical computer can be configured to represent multiple "virtual" computers and therefore make full utilization of that server. Each virtual server is independent of the next just like physical servers are but creating new servers can be done in minutes, not days. Not only is virtualization more efficient, it helps with recovery and failover as well, so the time between failures has been reduced dramatically.

Microsoft Technologies

Most businesses have Microsoft products somewhere in their networking environment; it could be server and desktop operating systems, email, database management, Microsoft Office or one of their business financial systems—Microsoft products are an important part of most companies' networks.

Not only does the Hynes Group run Microsoft products in-house but as a certified partner for Microsoft and Microsoft Cloud, the Hynes Group has expertise in most every major Microsoft product and has a team of qualified engineers who can support your business or your IT team when you need some outside help.

One of the Hynes Groups' core competencies is Microsoft SharePoint Server Solutions. Microsoft Office SharePoint Server provides a single, integrated location where employees can efficiently collaborate with team members, find organizational resources, search for experts and corporate information, manage content and workflow, and leverage business insight to make better-informed decisions.

Network Support

In an ever changing and advancing world of technology, what should be easier to manage and maintain isn't necessarily the case. Sure desktops and printers and even software have become more user friendly but the management of your network can still be an intimidating experience, especially when things go wrong.

At the Hynes Group we take a practical approach and provide whatever level of assistance that is right for your organization. Whether it is a remote management solution, a weekly visit to make sure things are running safe and secure or assistance with that once a year upgrade or new installation. We're also there when disaster hits making sure you get back on track to running your business.

For more information on the many services we provide, give us a call and we'll be glad to sit down and explain how we can help you.
